

IXL's personalized learning platform is the perfect complement for your competency-based education model.

Our adaptive curriculum and targeted guidance empower learners to achieve mastery at their own pace, while actionable insights from our Analytics and Real-Time Diagnostic make it simple for teachers to provide timely, differentiated instruction.

## ELEMENTS OF COMPETENCY-BASED EDUCATION

## HOW IXL SUPPORTS COMPETENCY-BASED EDUCATION

1

**Students are empowered to make decisions about their learning experiences.**

Built on the principle of active learning, IXL helps students learn through practice and exploration. IXL then uses insights from student work to create precise, timely, and deeply personalized skill recommendations for every learner.

This personalized guidance offers students opportunities for enrichment and remediation, and empowers them to take ownership of their learning.

2

**Meaningful assessment that yields timely, relevant, and actionable evidence.**

In just 45 minutes, IXL's Real-Time Diagnostic accurately assesses students' knowledge levels in math and ELA.

Based on each student's results, our diagnostic provides a personalized, growth-oriented action plan that suggests specific IXL skills to help learners close gaps and enable educators to differentiate instruction effectively.

3

**Students receive timely, differentiated support based on individual needs.**

IXL's robust analytics suite offers actionable insights that help educators pinpoint which students to help, how to help, and when.

With teachers making data-driven instructional decisions based on each student's individual learning progression, students feel more engaged and make bigger, faster gains both in and out of the classroom.

4

**Students progress based on evidence of mastery, not seat time.**

IXL is designed to help students build true mastery. Our adaptive curriculum keeps students in their zone of proximal development by constantly assessing their current abilities and adjusting accordingly.

In IXL, students almost never see the same question twice. This allows them to practice each skill as many times as they need in order to achieve true mastery.

5

**Students learn actively using different pathways and varied pacing.**

Students on IXL are never locked into a scripted path and have access to content across all grade levels. Through individually-curated skill recommendations, students can create personalized pathways that reflect their own unique needs, strengths, interests, goals, and pace.

IXL meets each student where they are at, right now. Our platform supports every student in progressing and achieving mastery at their own pace.

6

**Ensure equity for all students.**

At IXL, one of our core beliefs is that all students want to learn, can learn, and deserve to learn. We provide students with what they need to be successful, and it's not the same for every student.

No matter where a student is or where they come from, our platform can provide the learning experience that he or she specifically needs to develop their full potential.

7

**Rigorous, common expectations for learning are explicit, transparent, measurable, and transferable.**

IXL's curriculum is rigorous—it helps students understand problems in multiple contexts and prepares them for higher-level critical thinking.

Both teachers and students can view our digestible, actionable analytics. Together, they can set clear, attainable goals while tracking student progress with full transparency.
