

Keep the math learning going this summer with IXL!

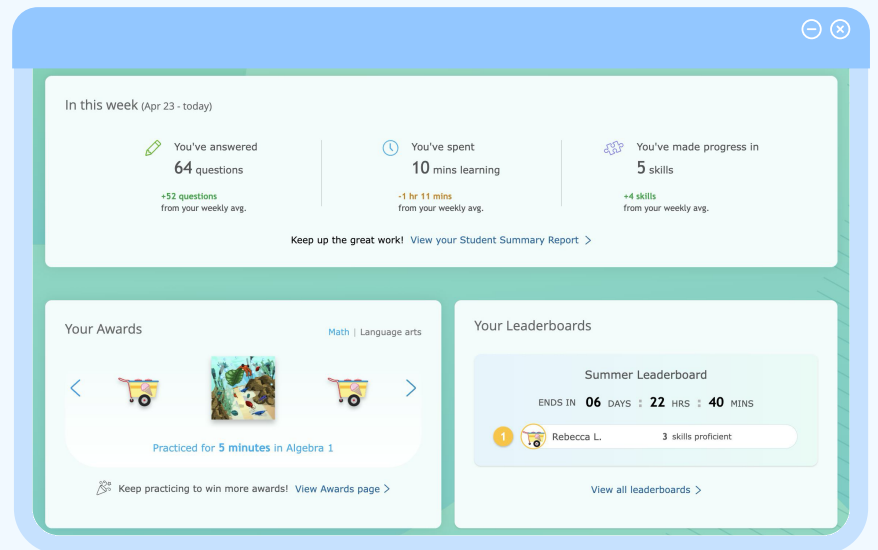

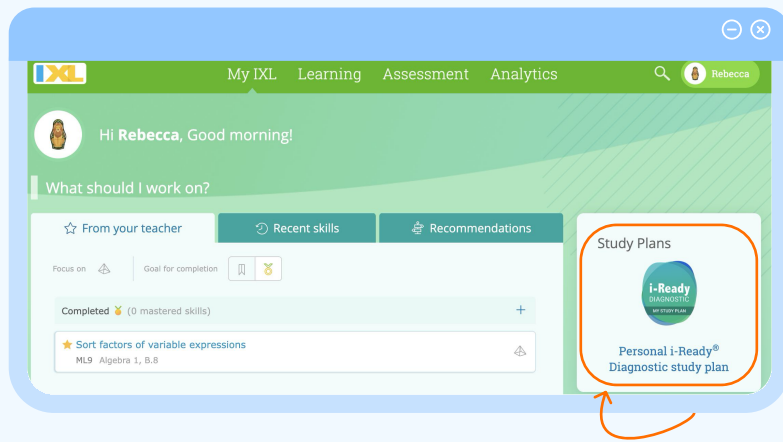

Exciting news: your child will have access to IXL all summer long! To get started, simply have your child [sign in to IXL](#) and start working on skills from their personal i-Ready study plan. This plan was created just for them based on their i-Ready Diagnostic results, tailored to their specific needs, and will give them a strong start next school year.

Begin targeted math practice right away with IXL:

1

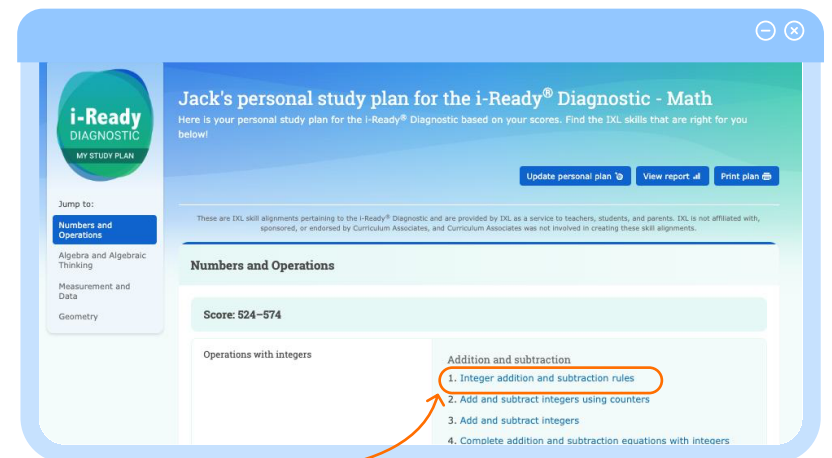

Have your child sign in to IXL and use their dashboard to find their personal i-Ready Diagnostic study plan, recent practice, awards, and Leaderboards.

2

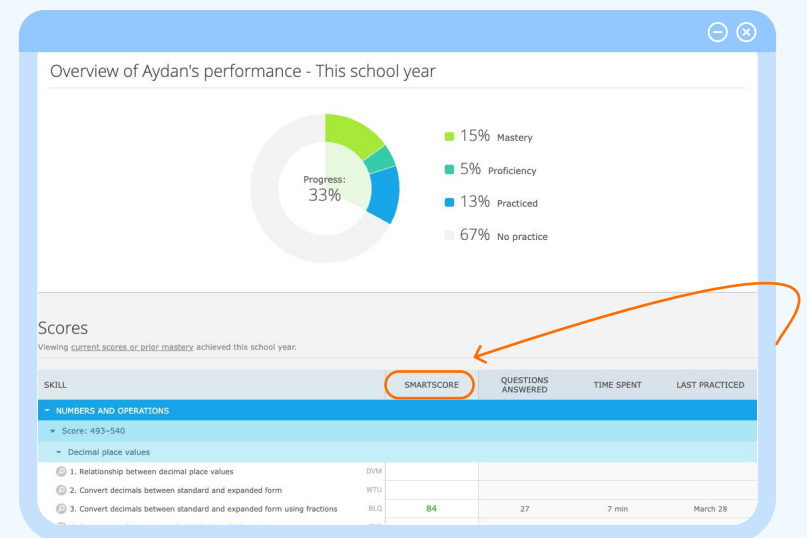

Your child will select skills from their personalized study plan. On each skill that they practice, they should reach a **SmartScore of 80** to show they have a good understanding of that skill.

Goal: Encourage your child to reach proficiency (a SmartScore of 80) on 20 skills by the end of the summer. We recommend about 2 skills per week.

3

Your child can monitor their own progress directly from their personal study plan. They can click "View report" on their plan to easily see which skills they've reached proficiency in, and which skills they should return to in order to reach a SmartScore of 80.

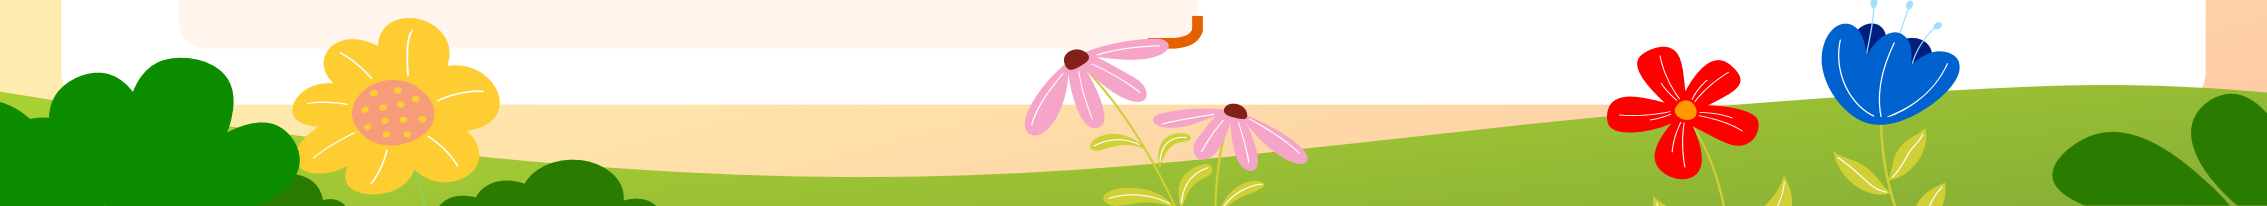

How you can help:

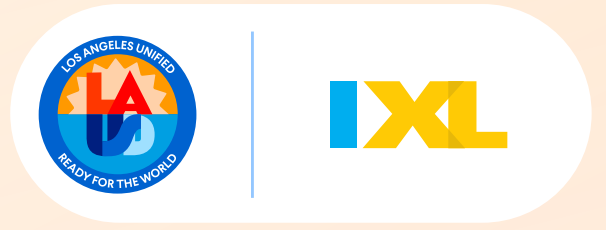

Establish a routine for your child that includes 15-20 minutes of daily IXL practice. Having a routine will motivate them and serve as a reminder to keep making progress in IXL, so they're prepared to excel in math when fall arrives!

Is your child ready for more?

If your child completes all skills in one domain, they can click "I'm ready for more" to see the next skills that build on the knowledge they've gained.

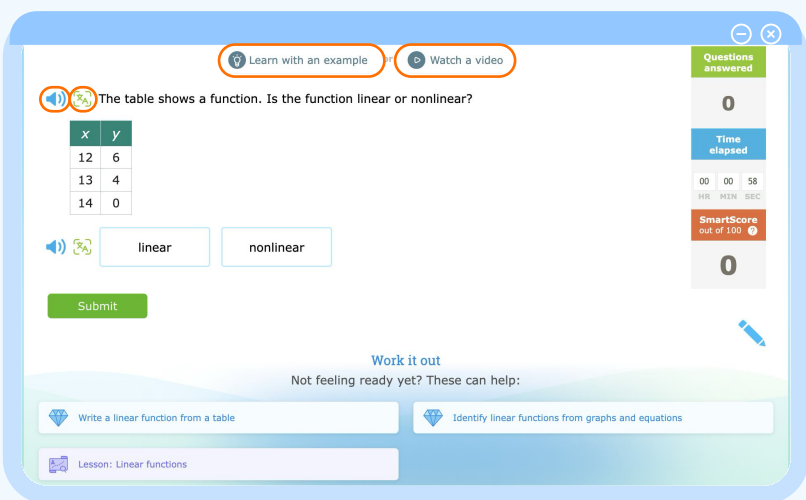

Tips for success

Work to a SmartScore of 80

For each IXL skill, your child should work to a SmartScore of 80, which is considered proficiency.

This assures that they have a really good grasp on the skill. If your child achieves proficiency and is ready for a challenge, they can always strive for mastery—a SmartScore of 100!

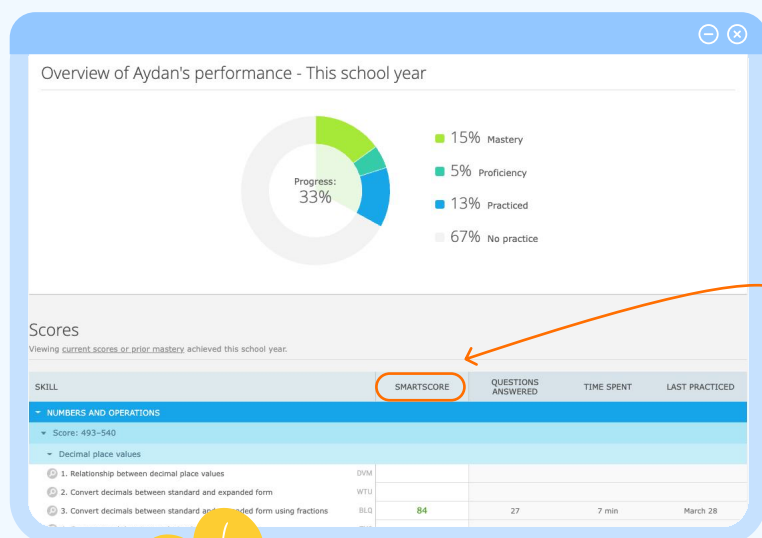

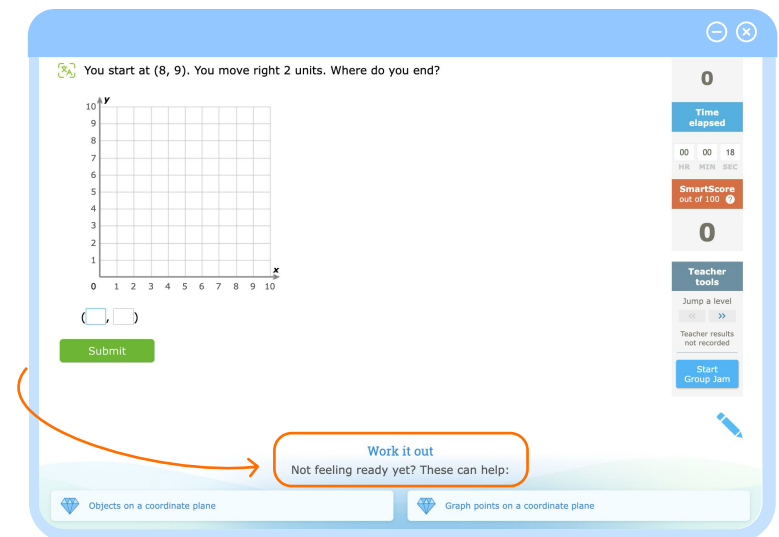

In-the-moment support

IXL provides built-in tools to enable students to learn independently. This includes Learn with an example, audio support, multi-language support, video tutorials for key math and language arts skills, and immediate feedback with step-by-step explanations.

Reinforce key concepts before moving forward

If you notice your child is feeling stuck while working on a skill, they don't have to stay stuck—support is just a click away.

They can use the in-skill recommendations at the bottom of the page under "Work it out" to work on foundational concepts. Then when they are feeling ready, they can tackle the original skill they were working on!

Track your child's progress

See how your child is progressing and where you can help them grow. From your child's personal i-Ready study plan, select "View report." You'll see all the skills your child has practiced from their study plan so that you can celebrate their success and encourage them to revisit any skill where they haven't reached a SmartScore of 80.
